DELIVERY PERFORMANCE ANALYSIS
SUPERSTORE DATASET

01

Project Objective

This project analyzes sales performance, profitability and delivery times using the Superstore dataset.

The goal is to identify patterns in product categories, shipping modes and delivery performance using Tableau.

Dataset & Tools

02

Dataset

Sample Superstore Dataset
~10,000 orders
Time period: 2020 – 2023

Tools Used

- Tableau Public
- Data Visualization
- Calculated Metrics (Profit Ratio)
- Geographic Analysis

Analytical Tasks

03

During this project several analytical tasks were performed:

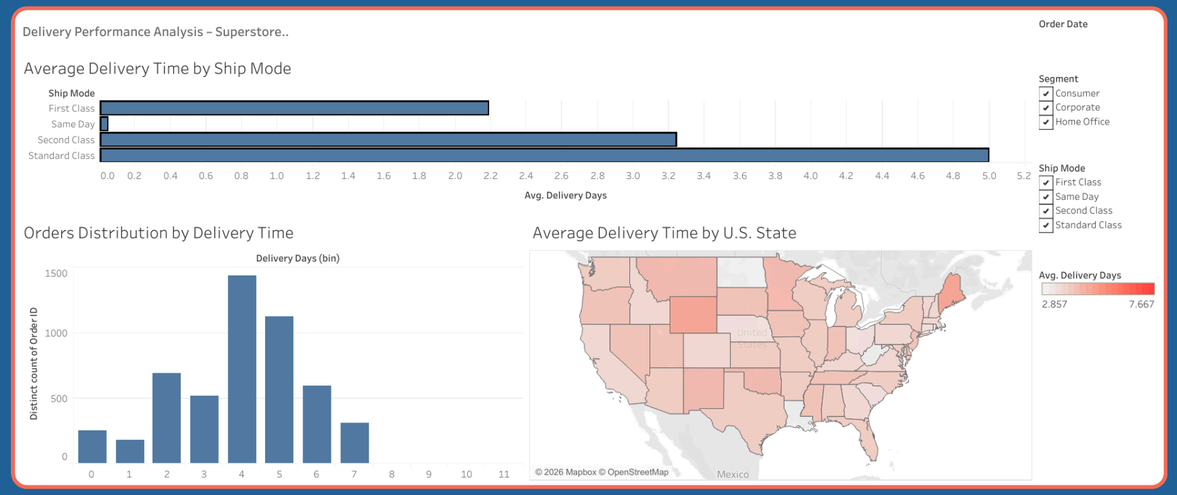
1. Sales and Profit time series analysis
2. Profitability analysis by category and shipping mode
3. Delivery time distribution analysis
4. Average delivery time by U.S states
5. Interactive dashboard creation

Interactive Tableau Dashboard

04

The dashboard combines multiple visualizations including:

- Sales & Profit time series chart
- Profitability heatmap table
- Delivery time distribution chart
- U.S delivery performance map



Key Insights & Conclusion

05

Key Insights

- Profitability varies significantly across product sub-categories
- Certain shipping modes show lower profitability for specific products
- Most orders are delivered within a few days
- Geographic differences exist in delivery performance

Conclusion

This project demonstrates how data visualization can help identify operational and profitability patterns using Tableau.
